Introduction

Each system in the world is created for improvement, organization or to solve a particular problem.

The dorms system in JUST is one of the important regulations that deal with the multiple categories.

This system suffers from a lack of organization and some of the services that do not provide full ease and convenience for all users. These problems hard to control and fixing it manually.

From here, we will present the Dorms management system.

This system will organize and manage students dorm in JUST, the system aims to use electronic registration instead manual registration, provide a suitable and safe environment and cover all the requirements so that students feel the greatest comfort and safety, also this project aims to provide a suitable environment to the employees to do their jobs to the fullest.

1.1 Scope

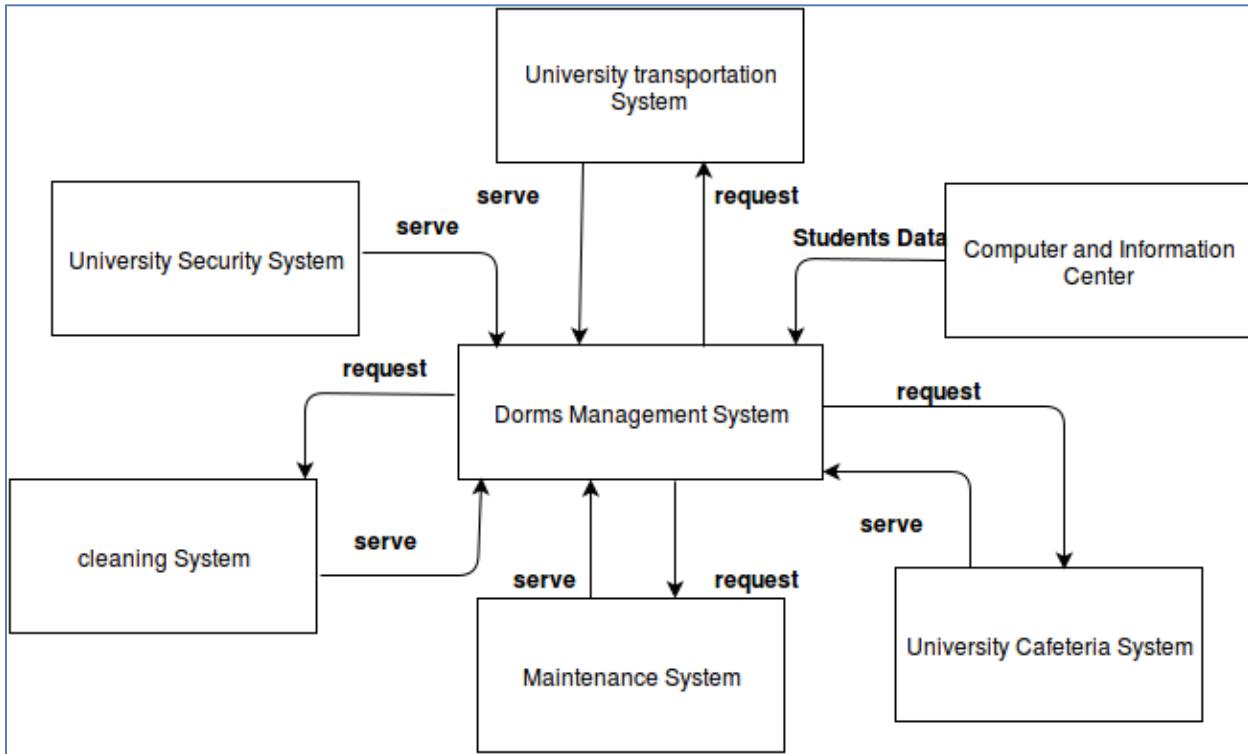

The system organizes the dorms in Jordan University of Science and Technology.

It is a web service system that will provide electronic services for the dorm student's and will manage, organize the dorms.

The aim of making this project on web is to achieve the availability of the services almost all the time and from anywhere.

This system will include services that will organize Rooms Services, transportation inside and outside the university, security, Cafeteria and basic services like registration and booking.

1.2 Architecture diagram

1.3 Methodology used -SDLC- from initiation to implementation

We used waterfall model in our project so we build our project based on 5 phases:

1. Initiation :

In this phase we decide the group members, group manager and the sponsor of our project.

Also, choosing purpose for the project and defining our goal.

The last thing in this stage is defining our mission and vision by doing this project.

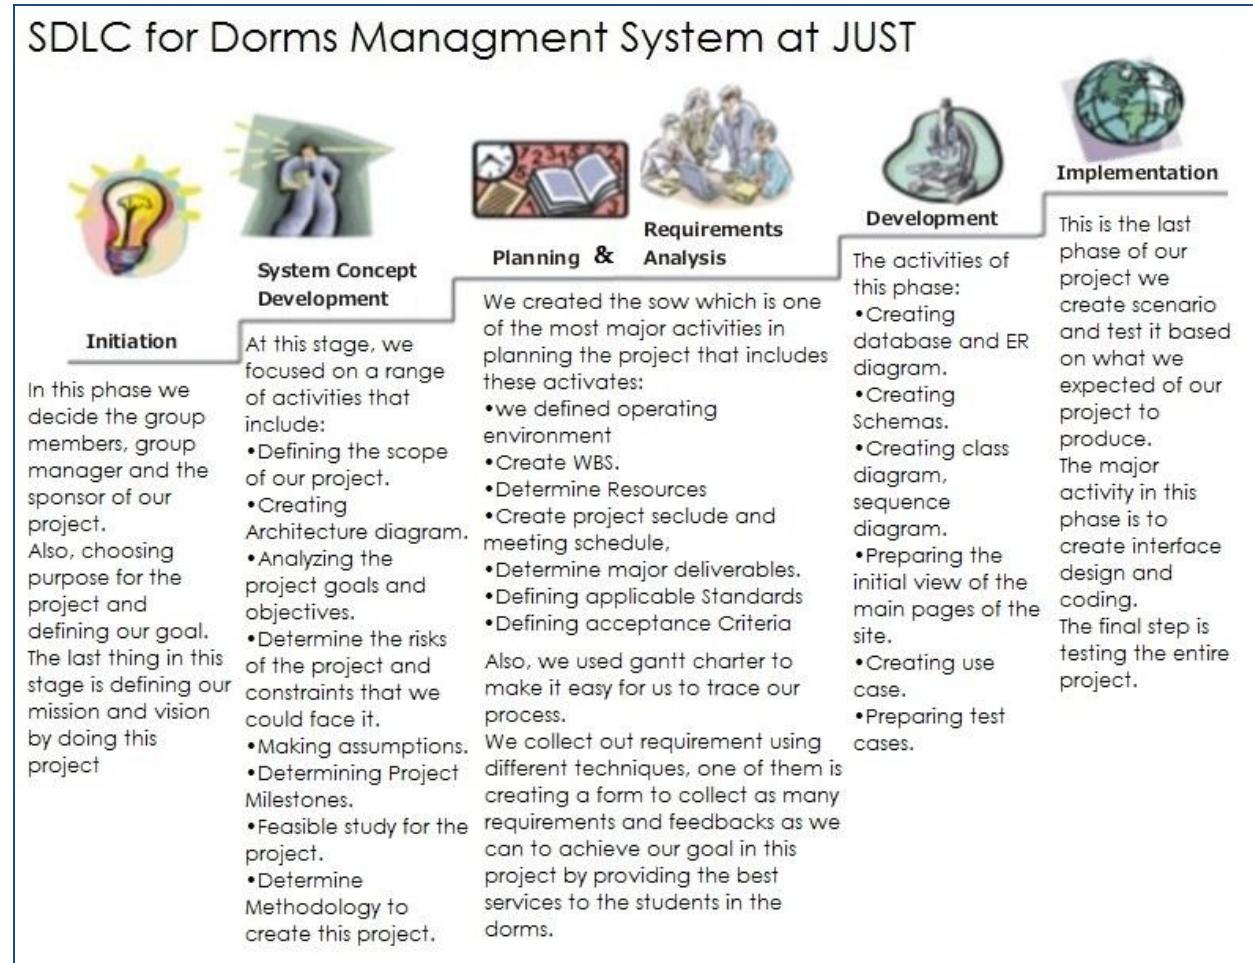

2. System concept development:

At this stage, we focused on a range of activities that include:

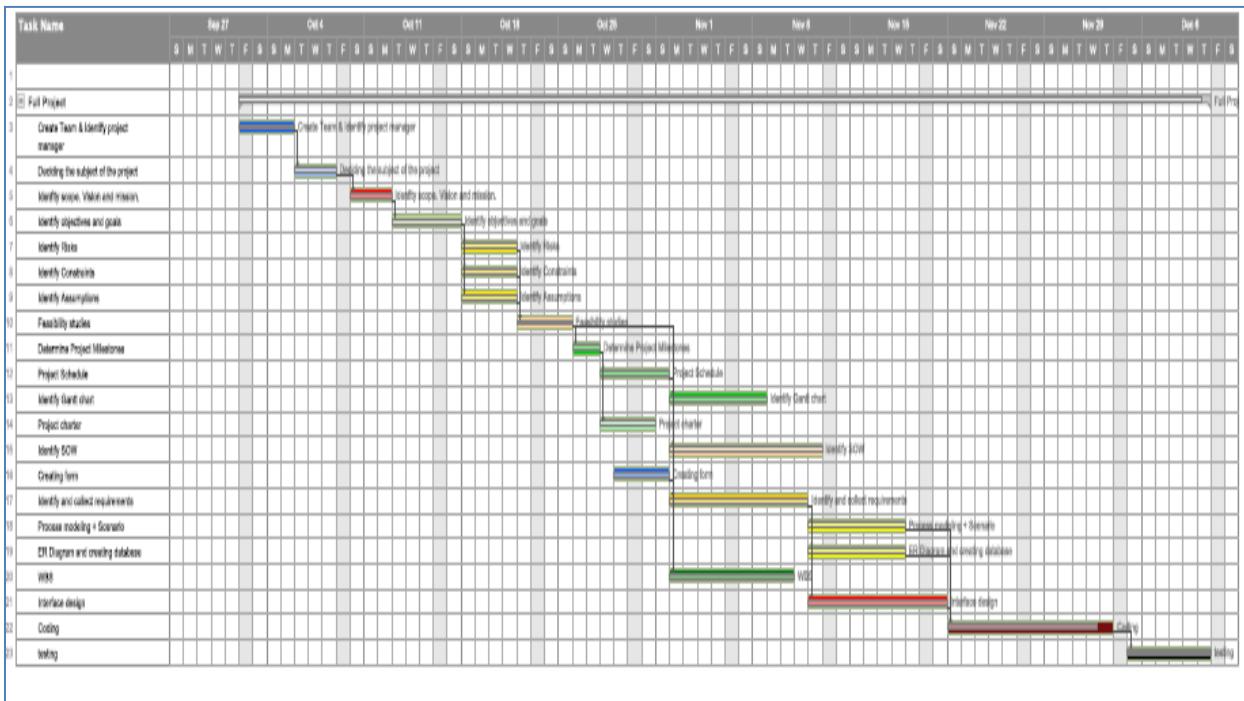

- Defining the scope of our project.
- Creating Architecture diagram.

- Analyzing the project goals and objectives.
 - Determine the risks of the project and constraints that we could face it.
 - Making assumptions.
 - Determining Project Milestones.
 - Feasible study for the project.
 - Determine Methodology to create this project.
3. Planning and Requirement analysis :
We created the sow which is one of the most major activities in planning the project that includes these activates:
- we defined operating environment
 - Create WBS.
 - Determine Resources
 - Create project seclude and meeting schedule,
 - Determine major deliverables.
 - Defining applicable Standards
 - Defining acceptance Criteria
- Also, we used gantt charter to make it easy for us to trace our process. We collect out requirement using different techniques, one of them is creating a form to collect as many requirements and feedbacks as we can to achieve our goal in this project by providing the best services to the students in the dorms.
4. Development / modeling :
The activities of this phase:
- Creating database and ER diagram.
 - Creating Schemas.
 - Creating class diagram, sequence diagram.
 - Preparing the initial view of the main pages of the site.
 - Creating use case.
 - Preparing test cases.
5. Implementation and testing:
This is the last phase of our project we create scenario and test it based on what we expected of our project to produce.
The major activity in this phase is to create interface design and coding.
The final step is testing the entire project.

We used this method because requirements in the project are very well known, clear and fixed, technology is understood and there are no ambiguous requirements.

1.4 Gantt chart

1.5 Glossary

API	Application Programming Interface
Documents	Residence instructions and regulations, application form, contract and authorization
Downtown	Irbid city
Registered	A female student who have an active room in the dorms
Room facilities	Kitchen, Bathroom, Study room and Restroom
ID	Identification
SOW	Statement Of Work
WBS	work breakdown schedule
OOP	Introduction to object-oriented programming

JUST	Jordan university of science and technology
NAT	Network Address Translation

Feasibility Studies

2.1 Technical Feasibility

The implementation of our project done by sub group of our team that includes Ahmed, Alaa and Yousef.

- Ahmed, Alaa and Yousef have taken C++ course, OOP, Data structures and algorithms, web application and c#.
 - Alaa and Yousef have a good background about programming skills that they have taken from participating in a contest every year and practicing on it almost every day, this background includes lots of algorithms that we could use it in our project to make it efficient and fast.
 - Ahmed is fully interested in technology; his background in security is very well. Also he has a good experience in making websites, creating database and searching for used components.
- ❖ These advantages of our programming team will make the project done in high level of quality and in easy-to-use interface.

The part of database is done by sub group that includes Mais and Mohammad.

- Mais and Mohammad have taken fundamentals of database systems course, they have got very good mark in there project, so they are the best who can make the database and ER-diagrams in the best way.

The part of diagrams is taken by sub group that includes Iman and Ammar.

- They have taken fundamentals of software engineering course. Also, they have an ability to learn fast.

Also, the team members have taken fundamentals of software engineering course, so they have ability to write document in efficient way based on their experience on making projects.

The team members have taken communication skills course, they have the ability to communicate with the team smoothly.

- ❖ All of these capabilities that characterize our team will make the project done in the right way as it expected.

2.2 Scheduling Feasibility

Our project will take about 70 days to finish, it will start on 2nd October 2015 through 10th December 2015.

After defining project phases, we put deadline for every phase.

To make sure that the project will not be late. We make testing after each phase, so that we can make sure that we are in the right line, and will not back to this phase again.

We use the Gantt chart tool to make sure that we are not late of the final deadline. Also, to know where we are now in the project, which will help us to define fast solution if we got late in any phase.

- ❖ We think that the team will work according to the agreed schedule, and if there is no delay of any team. We will get the job done correctly and in the expected time.

2.3 Legally Feasibility

Our project meant to be sub-department in JUST, which is legal organization, so all the applicable components and resources allocation must be after JUST permission.

One of the main requirements is hosting our website in JUST servers, this must done under some restrictions to add some security features such as the Isolation tech by NAT to a private server located in JUST to make sure that attacker cannot infect other servers.

Dorms database must NOT be infected so we have to clone some columns to a new database to make sure that the original is totally safe.

For security purposes for each student and manager an account on this website. This account must be approved by the manager. The student is the only person who can edit information or take any action with his own account. Also, there are restrictions on the passwords (must be guided strong).

The privacy of the students in dorms are considered as one of the website features, any students in dorms whom registered in websites can hide her profile from search or by members lists.

- ❖ This will provide a level of security in our website, that we think it will make the users feel safe and secure to use it.

Analysis phase

3.1 Techniques used to collect requirements

1. Interviews: We discussed with some girls in the university dorms the benefits of an online system that handles registration and dorms services over the manual registration.
2. Survey: Preparing an electronic questionnaire and deployed the link in to a special group for dorms girls, and collect the questionnaire results. (it will be attached with the project).
3. Prototyping: use partially finished versions of the software that have been created and explain it to a group of dorms girls to help us to validate requirements.
4. Request for proposals from a group of public categories by sending emails to them.
5. Discuss the possibility of achieving a dorms electronic system with some administrators at the university.

3.2 Form Result

- The form that we created to help us to collect requirements.

JUST DORMS

* Required

Do you think that enhancing transportation (buses) by scheduling and using website would be better ? *

Yes
 No
 Other:

Do you think that it's easier for you to ask for (room service) using website ? *

Yes
 No
 Other:

How often are you late for classes because of Buses ?
(Weekly)

2-4
 More than 4
 barely (less than tow)
 Not at all

Do you ever feel like a home in here ?

No
 yes

Do you think this whole system must be changed to be better ?
(Dorms system)

yes
 no , Just a few changes ..
 No , It is perfect

Rate the current Dorms system (1 - 5) *

1
 2
 3
 4
 5

Any suggestions for a new (Dorms organizing project) ? *
any idea could be usefull for you .. and may inspire us ..

Submit

Never submit passwords through Google Forms.

- The results :

You can see all the results on this link:

https://docs.google.com/forms/d/11PjPF-oLLCLEE5D2-7jrnM2jNBEM2kN0nzjqHhzaK_I/viewform

Timestamp	Do you think that enhancing dorms will be a good idea?	Do you think that it's easier to live in dorms than in flats?	How often are you late for classes?	Do you ever feel like a home?	Do you think this whole school's dorms are well organized?	Rate the current Dorms	Any suggestions for a new (Dorms organizing project) ?
11/18/2015 19:52:42	Yes	Yes	barely (less than two)	yes	no , Just a few changes .	3 No

3.3 Functional Requirement

❖ Registration:

- The system should allow users to send registration requests and they should fill some information (phone#, e-mail, name, ID#, country, city).
- The system should make sure that the user is a university student or not before accept the request, using name and ID#.
- The system should ask the students to download some documents to fill up and upload (Personal photo, Personal identity, birth certificate), and

they can agree to the terms and conditions on the assigned page on the website.

❖ Waiting list:

- The system will automatically check the user for eligibility for registering in the dorms, and send their requests to the waiting list to sort the requests according to a set of conditions.
- The administrator requests viewed by the supervisor, if it is approved then it is removed from the list and assigned a room instantly, but in case of violating the conditions it's rejected by the supervisors.

❖ Rooms Maintenance:

- The system should provide full maintenance process for any room after the evacuation of former student, The room will automatically be placed in the list of maintenance, to be the room within the approved specifications after the completion of the maintenance of the room, the room is deleted from the list of maintenance, and placed in the list of available rooms.

❖ Available rooms:

- The system generates a list of available rooms, as soon as a room is free it is sent to this list, and the system will check the waiting list for the next request for this room.
- If the system finds one it will send the request and the room info to the supervisors for confirmation or rejection if they don't matchup.
- Every time the waiting list is updated a matching algorithm starts .The system should allow users to ask for a change in room and building.

❖ Dorms index:

- The system should provide the buildings and the room's category and some information about the rooms alongside some photos and the pricing.
- The system should ask the users to choose what they want.

❖ services:

- The services should be available online on the website , and the system should allow the users to access the services by username and password , such as :

- Student services:
 1. Logout: This service will be used when the student wants to take a vacation outside the dorms.
 2. Online payment: A secure system is available for online payment.
 3. Mailing: A direct communication is kept between the student and the supervisor.
 4. Suggestions and complaints: Students can send suggestions and complaints via the website, and then it's sent directly to the administrator.
 5. Penalty: This service lists the penalty in case of breaking the rules.
 6. Evacuation: In case the student wants to drop-out, a request is sent to the supervisor to inform them.
 7. Transportations : this system is responsible for the transportation of the student inside and outside the university, and to the dorms, and it's also responsible for students transportation between the university and Downtown and the system should allow students to :
 - A student can look out on bus schedule to know its Excursions.
 - A student can request bus out of the buses schedule and it is accepted if there is a sufficient number.
- Room Service:
 1. Cleaning schedules: to ensure that the rooms in the housing will be cleaned in best circumstances.
 2. Heating and Conditioning: to ensure a better environment inside the housing and a student can apply to the supervisor to modify the degree of the heating.
 3. Water Request: to ensure a better environment inside the housing in case of water interruption for facilities for the chamber of the student.
 4. Gas Request: in case the gas ran out for facilities for the chamber of student a student can submit a request to his supervisor.
 5. Washing service: to ensure fair usage to suit everyone, they set a special schedule to use the washing service so every student has his own appointment to use this service and the student can have an access to their appointment using this service and a student can apply a request to his supervisor to obtain additional appointments.

6. Room Service request: in case of any condition that requires special room service, a student can submit a request to gain this service from his supervisor.
7. The cafeteria: The cafeteria menu will be available on the website, Students can order a meal, and the cafeteria serves deliver it.

❖ Supervisor Management:

- Every supervisor has a special website page related to the service that he has to do, and this website page gives him and 24/7 connection with the students and their needs.
- The website enables the supervisor to see the application of departure for the weekend, as it is sent to all students in charge of their requests.
- The website enables the supervisor to see requests for reconsideration and work on them as soon as possible, and build schedules that are related to washing services and room services, and the approval of the additional appointment and include them in the table.
- Supervisor can send the bus to the bus stop stations according to the requests coming from the students, where they can approve or reject the request.
- The supervisor can give the Penalty to the student in case of breaking the rules.

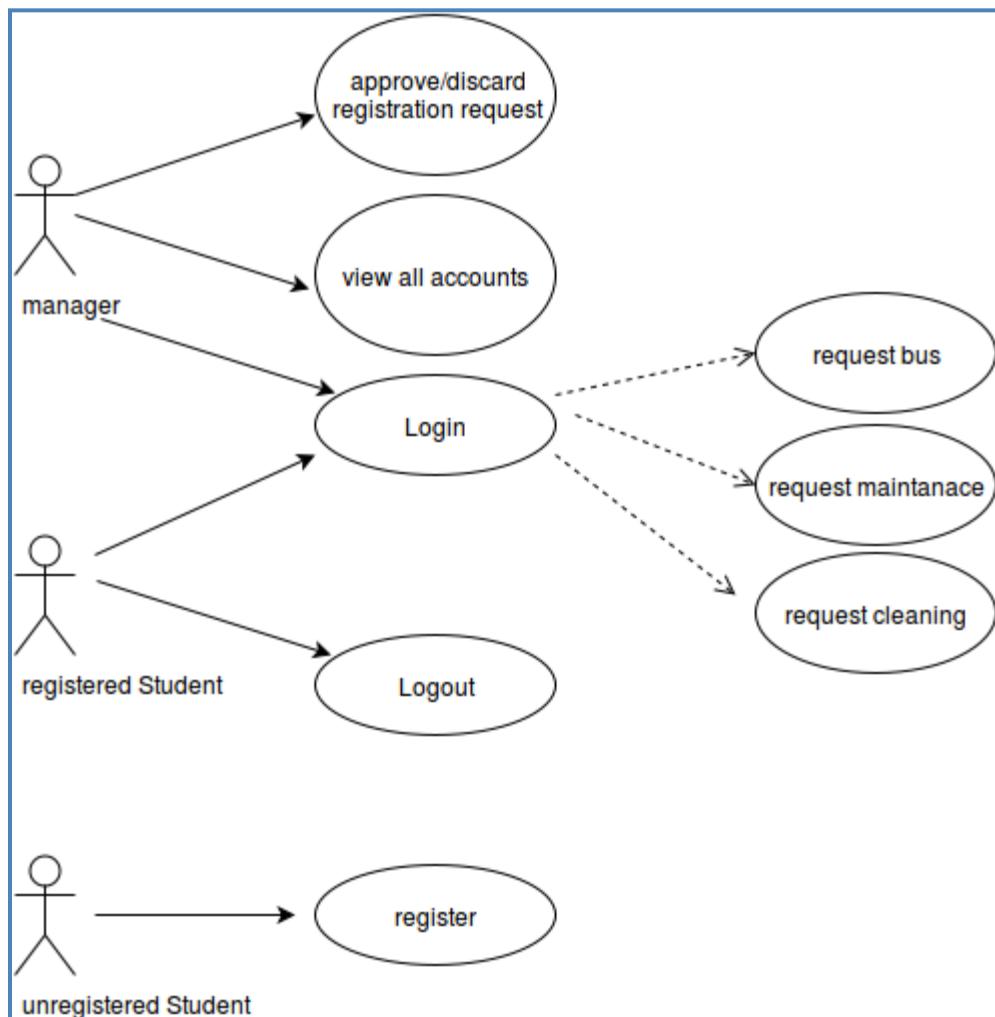

❖ Administrator management:

- The administrator has a screen that shows functions and services that are available to them and this screen gives the administrator 24/7 connection between them and students and supervisors.
- In case of a vacancy suitable to one of the student that want register , they must inform the administrator so they can study the request and make sure about the information trustiness then approve or reject the request.
- All withdrawal requests are sent to the administrator, where they can approve it.
- Administrator is responsible for students Suggestions and complaints.

3.4 Non Functional Requirement

1. Performance: the system should react in the shortest time possible to eliminate any delay, so any action at any given time will not take longer than 3 seconds, And when interacting with the system data base a query is created by the function/method called but no longer than 4 seconds.
2. Safety: the system will back up the data base every 24 hours, and then is stored on a separate storage disk drives, keeping an easy way to retrieve the data in case of a system crash.
3. Security: the main security system is exercised through permissions to access any personal information, and the connection between the server and the user will be protected by different types of proxies and encryption methods.
4. Availability: in case of system malfunction, the system has an ability to reboot in a remarkably short time to deliver all the functionality, which makes the system available at any given time.
5. Correctness: ability with which the software respects the specification.
6. Flexibility and usability: the software will have a fairly simple and easy to use GUI; this makes the software easy to be adapted to it.
7. Maintainability: the system will be flexible and easily upgradeable to new versions.
8. The system will be simple and easy to use.

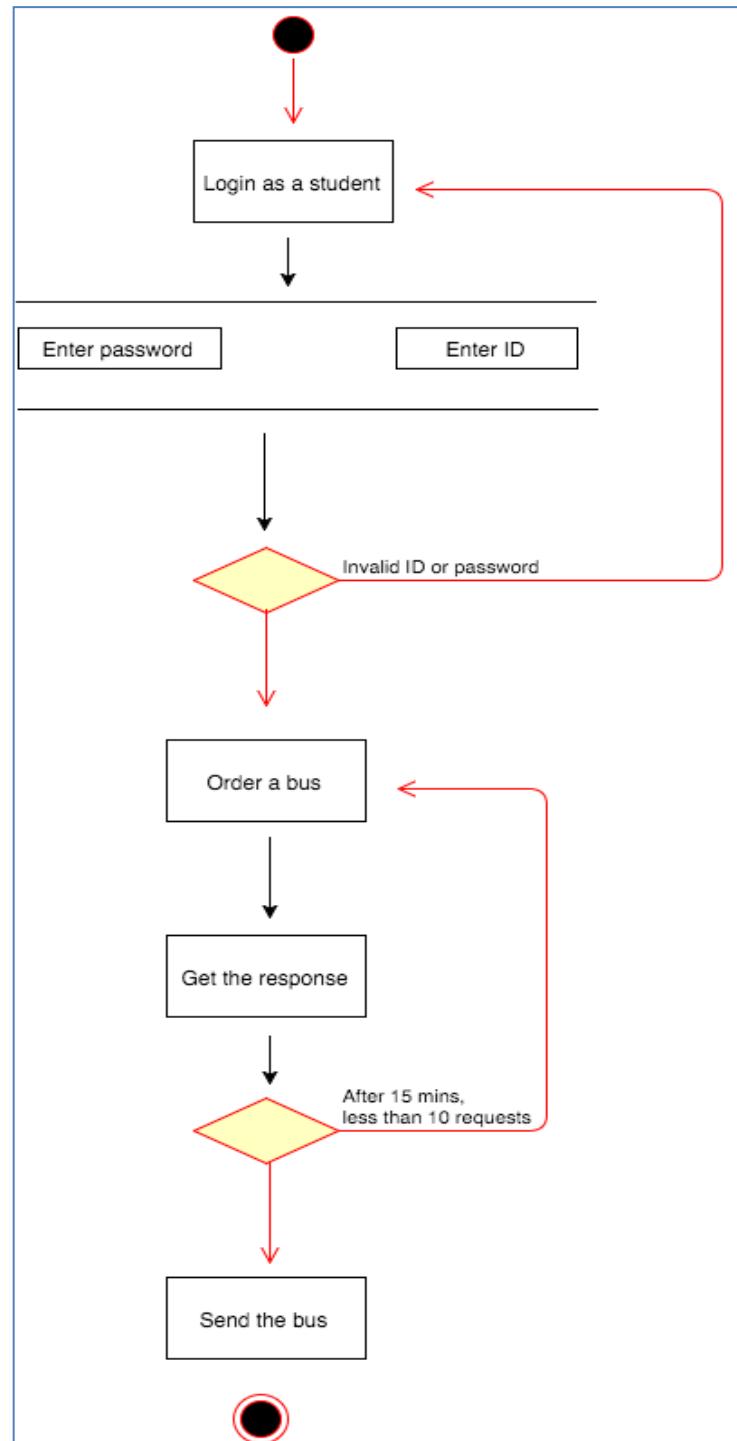

3.5 Use Case

3.6 Scenario

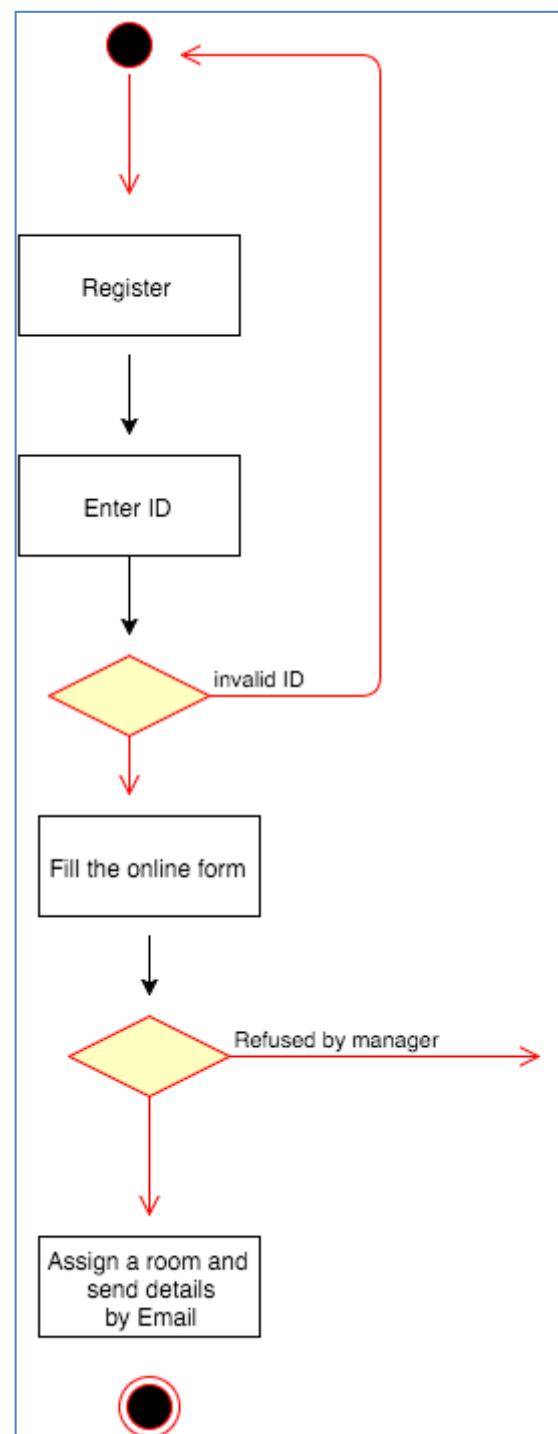

- Scenario (Ordering a bus)

1. Eman opened the website, chose Students login tap.
2. She filled her ID, password.
3. She opened services tab, chose transportation.
4. She ordered the bus.
5. A response has been shown to her, to wait for 15 minutes to get the full response.
6. The manager checked the bus request; there were less than ten requests.
7. A message sent to eman by manager, "Sorry there were less than 10 requests for a bus in the last 15 minutes, please try again".

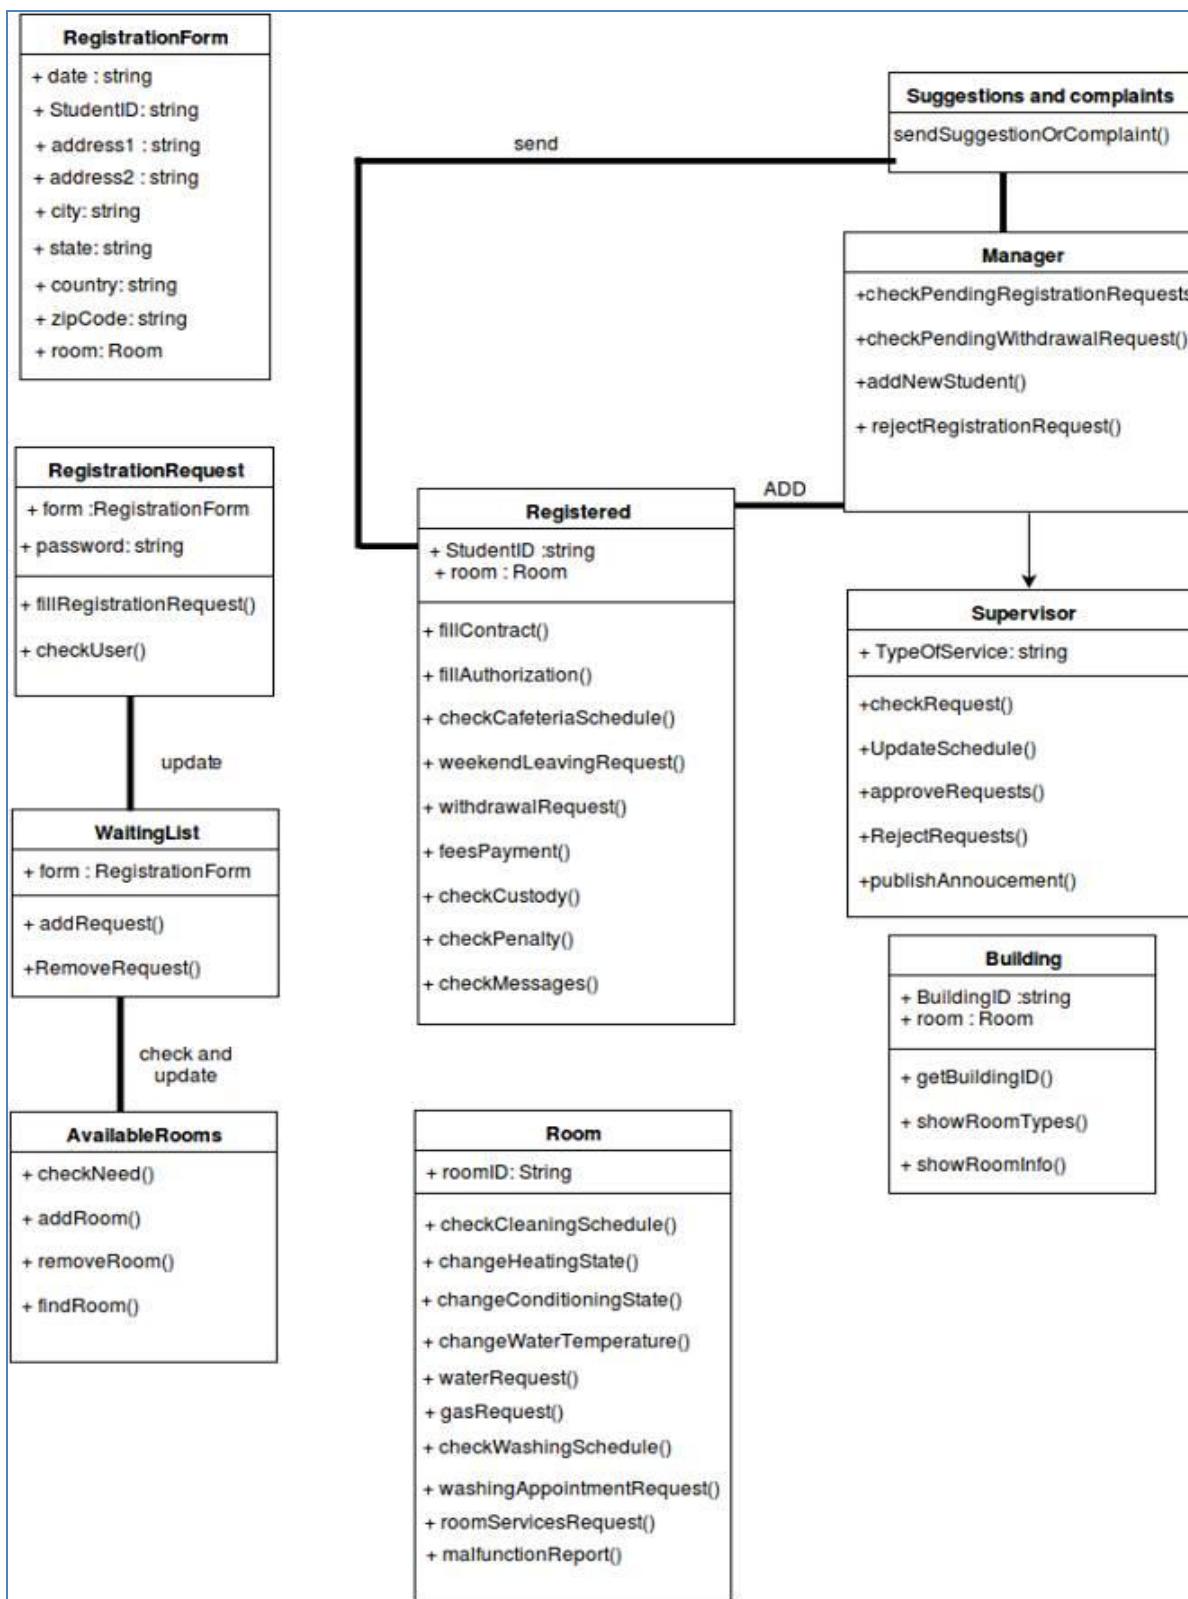

- Successful Scenario (Registration)

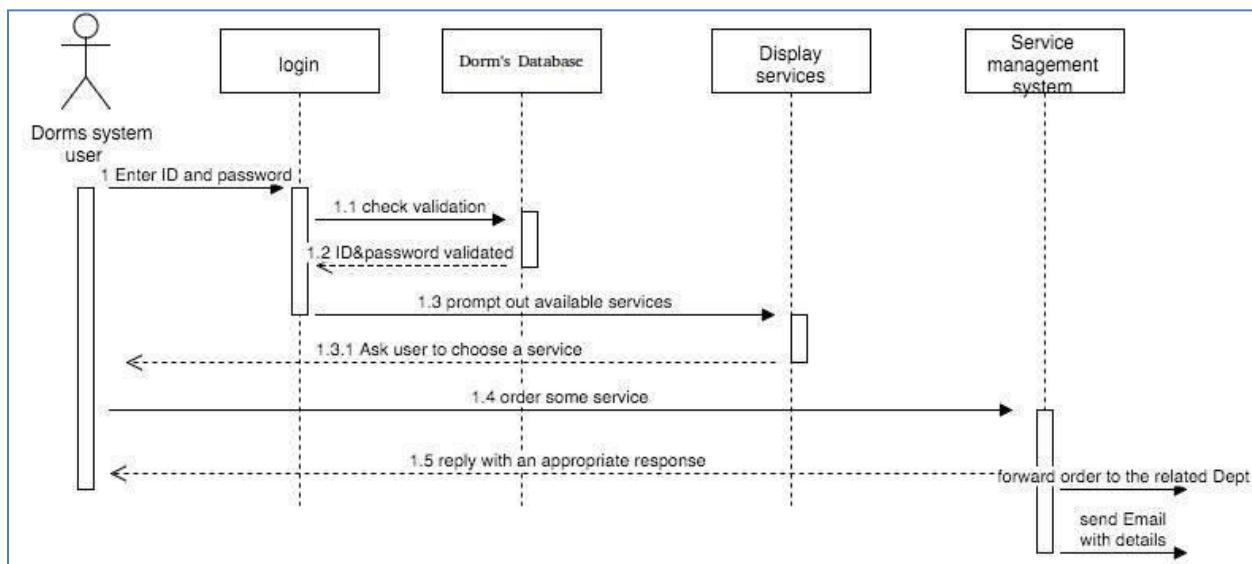

1. Eman opened the website, chose registration tab.
2. She filled student ID, the system checked it from JUST's database, It was acceptable in terms of ID, gender.
3. She filled the registration form, sent it by email.
4. The manager checked the waiting list; eman was the first one in the queue.
5. The manager assigned a single room for her, as required, sent the details of registration to eman by email.

5.2 Graphical user interfaces, public, students and supervisors.

1. Home page:

- This page is available for public and users of the website.
- It has a slide chosen pictures of JUST dorms buildings and rooms, some statistics about our services availability, and a brief explanation of our main web services.

The screenshot shows the homepage of the JUST Dorms website. At the top, there is a navigation bar with links for Home, Gallery, Services, Account, and About Us. The Home link is highlighted with a teal background. Below the navigation is a large banner image showing a building complex under a cloudy sky with a rainbow. A horizontal dotted progress bar is visible at the bottom of the banner. Underneath the banner, the title "Availability of online response :" is displayed, followed by a horizontal bar chart. The chart lists five services with their availability percentages:

Service	Availability (%)
Maintenance and (Water, Gas)	80%
Website service	100%
Cleaning and Laundry appointment	85%
Cafeteria and transportsations	90%
Mailing , Suggestions and Complaints	100%

A section titled "Our Services" follows, featuring five buttons: Research, Usability, Services, Privacy, and Socialize. Below this is a text box containing a message about student requirements and a statement from the website. At the bottom, there are social sharing icons for Google+, Facebook, and Twitter, along with a footer note about project management.

- ❖ Log-in page:
 - To access or to use any of the provided service, a user is asked to login first.

The screenshot shows the login page for the JUST Dorms website. At the top, there is a dark header bar with the website's logo, "JUST Dorms", in large red letters. Below the header, a navigation bar contains links for "Home", "Gallery", "Services", "Account", and "About Us". The main content area has a white background and features a large, bold "Login" heading. Below the heading are two input fields: one for "Username or E-mail" and one for "Password", both represented by simple text input boxes. There is also a checkbox labeled "Keep me signed in". At the bottom of the form are two buttons: a blue "Login" button and a grey "Register" button. A small link "Forgot your password?" is located just below the "Register" button. The footer of the page is dark and contains the text "Powered by JUST dorms Department, | Project management."

- ❖ Air Conditioning:
 - This is a conditioning-form request page.
 - It asks a student to fill some information about her and the conditioning status of the room.

❖ Transportation Management:

- This page allows the supervisor to edit Transportation main page.

The screenshot shows a web application interface for managing transportation. At the top, there's a navigation bar with links for Home, Gallery, Services, Account, About Us, and Transportation. On the right side of the header, there are buttons for 'Backend Editor' and 'Update'. A 'Column Settings' modal is open in the center-right area. The modal has tabs for General, Design Options, and Responsive Options, with 'General' selected. It includes fields for 'Extra class name' and a note about styling content elements. Below the modal, the main content area displays text: 'This page appear only for students who registered in JUST dorms.' and 'You can see here the map of bus stations and the Schedule that periodically buses follow.' The background shows a decorative pattern of overlapping semi-circles with the text 'I feel Better'.

- This page allows the supervisor to manage out-of-schedule requests.

The screenshot shows a list of submitted transportation requests. The title is 'Submissions - TransportingForm' with a 'Log Out' button. There are two tables of data. The first table has columns: '#', 'Name:', 'ID:', 'Hour (24-hour):', 'Minutes:', and 'Date'. It lists five entries: entry 5 by eman (submitted 4 hours ago), entry 4 by ol (submitted 2015/12/17), entry 3 by Eman (submitted 2015/12/17), entry 2 by eman (submitted 2015/12/04), and entry 1 by ahmed (submitted 2015/11/30). The second table has the same structure and lists five more items. At the bottom, there are buttons for 'Bulk Actions', 'Apply', and 'Download All Submissions'.

7. Accounts profiles:

- This is the profile page, for students, supervisors, and the manager.
- If the user chooses the privacy option to be public, this page will only appear to users of the site.

The screenshot shows a user profile page for 'fake user_student' on the JUST Dorms website. The header features the 'JUST Dorms' logo in red. Below it is a dark blue navigation bar with links for Home, Gallery, Services, Account, and About Us. The main content area has a light gray background. At the top, the username 'fake user_student' is displayed in bold black text. Below the username is a large, empty placeholder area for a profile picture. Underneath this area is a circular placeholder icon containing a gray person silhouette. To the right of the placeholder, the text 'fake user_student' is repeated. A dark blue footer bar at the bottom contains three white icons: a person, a pencil, and a speech bubble. Below the icons is a small, empty input field. Further down the page, there is a large, empty text area with a horizontal line for notes. At the very bottom, a dark blue footer bar contains the text 'Powered by JUST dorms Department. | Project management.'

8. About us:

- This is the Dorms system public information page.
- It provides the public and users with information's about the Dorms system, accommodation fees for students, a map to the Dorms location, and contact information's.

JUST Dorms

Home Gallery Services Account About Us

About Us

Jordan University of Science and Technology is seeking to provide the best services and facilities for its students, to make sure that it's providing the adequate environment for the students to be creative and among the best locally and globally. And one of these services offered by the university is the girls dorms which contains its own featured facilities and services that interacts with many of other systems from the university, and that would provide a better environment for the student accommodation.

Accommodation Fees for students' per semester

Buildings numbered from (1-10) include the following rooms with the following prices:

- Single room for one student (containing bath, refrigerator inside the room) but with a sharing kitchen, fees 660 JD per semester.
- Single room for one student, with a refrigerator in the room (sharing bathroom and kitchen) fees 492 JD per semester.
- Double room for two students (bath, kitchen shared) fees 300 JD per semester.

Studios in building B4:

- A single studio for one student (containing a kitchen, bath, air conditioning, refrigerator, and microwave) Fees 1250 JD per semester.
- Double studio double for two students (containing a kitchen, bath, air conditioning, refrigerator, microwave) Fees 1500 JD per semester divided equally.

Princess Basma building for female students:

- Single room for one student (containing bath) sharing kitchen fees 1000 JD per semester.
- Double room for two students (containing bath) sharing kitchen fees 1200 JD per semester divided equally.

NOTE : All the prices above are reduced to half (50%) during summer semester.
